PROFESSIONAL SUMMARY

Experienced Java Backend Developer with over 2+ years of expertise in designing, developing, and maintaining scalable backend systems. Proficient in Java, Spring, Spring Boot Framework, Hibernate, and RESTful APIs. Adept at collaborating with cross-functional teams to deliver high-quality software solutions. Strong problem-solving skills and a passion for continuous learning and improvement. Seeking to leverage my technical skills and experience to contribute to innovative projects and drive business success.

TECHNICAL SKILLS

Languages

JAVA, KOTLIN, PYTHON,
HTML, CSS, JavaScript.

Database

SQL, PostgreSQL, My SQL, MongoDB

Architectures Development

Event Driven & Domain Driven Design, MVC
and Spring Boot API three layer Architectures.
Micro Services and Third-party software integrations.

Frameworks & Services

Spring, Spring Boot, Spring MVC, Hibernate, Axon
Framework with Kotlin, AWS S3, Keycloak Security
service with Java, Docker, Kafka, Flask with Python.

Design & Patterns

Core Java (or JSE) Design Pattern,
JEE Design Pattern.

Other tech stack

GraphQL, gRPC development, Chat bot building,
system flow planning, Productive Postman usage,
React JS (learning).

PROFESSIONAL EXPERIENCE

Software Developer

Synycs Group (Mar 03, 2023 — Present) HYD

- Developed and maintained backend systems using Java, Spring Framework, and Hibernate. Low-level functionality, Security and Collaborated with cross-functional teams to deliver high-quality software solutions.
- Implemented Spring Boot and Axon Frameworks to enhance standardized code experience by minimized functionality.
- Established Aws S3 Service functionality and successfully resolved issues regarding S3 Service end to end.
- Implemented RESTful APIs and integrated third-party software and Optimized database queries for SQL and NoSQL databases.

Internship

Synycs Group (Oct 03, 2022 — Mar 03, 2023) HYD

- Led dependency migration from java 8 to java 11 across with team members.
- Collaborated with teams to migrate other JAVA dependencies, such as Swagger, Smtip mail and Keycloak plugins.
- Implemented report Issues module & unit module to decrease the failure case functionality in collaboration with a colleague.

PROJECT DETAILS

Project 1:- Schedule.com (Product) Client: SYNYCS

- Schedule.com is a powerful scheduling solution built to streamline and automate appointment management for both consumer-to-consumer (C2C) and business-to-business (B2B) interactions.
- The platform enables users to configure their availability, set time zone preferences, define recurring schedules and holidays, and generate shareable booking links. It also supports buffer time settings, making it ideal for organizing meetings, consultations, and service appointments efficiently across diverse industries.
- The system intelligently manages overlapping bookings, prevents scheduling conflicts, and ensures real-time updates to maintain accurate availability. With a focus on flexibility and ease of use, Schedule.com improves productivity by reducing the manual effort involved in coordinating appointments.

- My responsibilities included third party software integrations like google, microsoft calendars, meeting apps. database design, ensuring secure and efficient data transactions, and integrating OAuth2.0 services. I also implemented authentication and authorization mechanisms using keycloak for traditional registration to provide a seamless and secure user experience.
- Built on Spring Boot JAVA, Axon Framework, Event Driven and DDD, API Implementation on Kotlin, AWS S3 Storage, Keycloak Auth, MongoDB. Google API, Microsoft API, OAuth2.0

Project 2:- 4Paws Client: Rahul and Sravan

- 4Paws project focused on developing cutting-edge solutions to address a comprehensive pet care service platform, we designed and implemented robust APIs to handle functionalities such as scheduling doctor and grooming, hospital appointments, facilitating pet buying and selling through bidding systems, and managing an e-commerce section for pet-related products like food, medicine, and accessories.
- My responsibilities included database design, ensuring secure and efficient data transactions, and integrating third-party services. I also implemented authentication and authorization mechanisms using keycloak to provide a seamless and secure user experience.
- Built on Spring Boot JAVA, Axon Framework, Event Driven and DDD, API Implementation on Kotlin, AWS S3 Storage, Google geocoding API, Keycloak Auth, MongoDB.

Project 3:- Employee Tracking (Product) Client: SYNYCS

- Employee Tracking is an Organizational Employee management system software. It will track the employee like their attendance, leaves and their system active screenshots.
- Management can upload Holidays list in that year employees can see. We planning a feature called task assignment for a week and To get work status update daily.
- Employee Tracking is an application for Employee management System and tracking on work status.
- Built on Spring Boot JAVA, MongoDB, S3 Storage, Keycloak Auth, Axon-Framework, API Implementation On Kotlin.

Project 4:- WickLand Client: Australia (Intern)

- WickLand project is a park management system software. It will provide residences to the user, those types are Seasonal Chalet, Residential Chalet, Caravan and Holiday Chalet. They provide temporary accommodation for staying one year and they will also provide features to renewal/extend the license.
- Wick Land is an application for tenant management, ticket management, license management and billing management.
- Built on Spring Boot JAVA, MongoDB, S3 Storage, Keycloak Auth, Axon-Framework, API Implementation On Kotlin.

EDUCATION DETAILS

Bsc (General Science) From Acharya Nagarjuna University (ANU) GUNTUR 2018 - 2021.
