PROFESSIONAL SUMMARY

Experienced Java Backend Developer with over 3.5+ years of expertise in designing, developing, and maintaining scalable backend systems. Proficient in Microservice architecture tech stack **Java, Kotlin, Python, Flask, Fast API, Spring, Spring Boot Framework, Hibernate/JPA, and RESTful APIs**. Adept at collaborating with cross-functional teams to deliver high-quality software solutions. Strong problem-solving skills and a passion for continuous learning and improvement. Seeking to leverage my technical skills and experience to contribute to innovative projects and drive business success.

TECHNICAL SKILLS

Languages

JAVA, KOTLIN, PYTHON,
HTML, CSS, JavaScript.

Database

SQL, PostgreSQL, My SQL, MongoDB

Architectures Development

Event Driven & Domain Driven Design, MVC
and Spring Boot API three layer Architectures.
Micro Services and Third-party software integrations.

Frameworks & Services

Spring, Spring Boot, Spring MVC, Hibernate, Axon
Framework with Kotlin, AWS S3, Keycloak Security
service with Java, Docker, Kafka, Flask and FAST API.

Design & Patterns

Core Java (or JSE) Design Pattern,
JEE Design Pattern.

Other tech stack

GraphQL, gRPC development, Chat bot building,
system flow planning, Productive Postman usage,
Kubernetes, Docker Hub and React JS (learning).

PROFESSIONAL EXPERIENCE

Software Developer SDE-II

Synnys Group (Mar 03, 2023 — Present) HYD

- Developed and maintained backend systems using Java, Kotlin, Python, Spring Framework, and Hibernate/JPA. Low-level functionality, Security and Collaborated with cross-functional teams to deliver high-quality software solutions.
- Implemented Spring Boot and Axon Frameworks to enhance standardized code experience by minimized functionality.
- Established Aws S3 Service functionality and successfully resolved issues regarding S3 Service end to end.
- Implemented RESTful APIs and integrated third-party software and Optimized database queries for SQL and NoSQL databases.

Java Backend Developer

SWOT Careers (July 25, 2022 — Feb 24, 2023) HYD

- Developed and maintained backend systems for the Psychometric & RIASEC Assessment Platform using Java, Spring Boot, and Hibernate, ensuring scalable and secure assessment delivery.
- Designed and implemented RESTful APIs for test creation, scoring logic, and candidate result generation. Optimized SQL database queries for storing candidate profiles, test results, and reporting dashboards.
- Contributed to cross-functional team to deliver a recruitment & career guidance platform improved recommendation reliable

PROJECT DETAILS

Project 1:- Synops AI-Powered - Cloud Cost-Optimization Platform Client: IN-HOUSE synops.in

- Synops AI is an in-house cloud cost-optimization platform that analyzes runtime resource usage, identifies waste, and automates to reduce cloud spend while preserving performance. Platform collects real-time cluster and pod metrics, usage with resource requests/limits, exposes APIs for dashboards and automation, and integrates with monitoring and visualization tools for alerting.
- Key features implemented Real-time metrics collection and normalization from metrics.k8s.io for nodes and pods. REST APIs (FastAPI) that expose cluster/node/pod details, capacity vs usage, percentages, and age/labels for dashboard consumption.
- As a Backend Engineer on the Synops AI team, I designed and implemented core services of our in-house cloud cost-optimization platform using Python and FastAPI. I built robust REST APIs to expose cluster, node and pod metrics, etc.
- Built on FAST API, Python, Kubernetes, EKS, Docker, Docker Hub, GitLab, Pydantic, Uvicorn, Rest API Design, Rest API Services, Core Logging, Rest API Integration, AI Tools, GPT, Copilot.

Project 2:- Schedule.com Client: IN-HOUSE

- Schedule.com is a powerful scheduling solution built to streamline and automate appointment management for both consumer-to-consumer (C2C) and business-to-business (B2B) interactions.
- The platform enables users to configure their availability, set time zone preferences, define recurring schedules and holidays, and generate shareable booking links. It also supports buffer time settings, making it ideal for organizing meetings, consultations, and service appointments efficiently across diverse industries.
- The system intelligently manages overlapping bookings, prevents scheduling conflicts, and ensures real-time updates to maintain accurate availability. With a focus on flexibility and ease of use, Schedule.com improves productivity by reducing the manual effort involved in coordinating appointments.
- My responsibilities included third party software integrations like google, microsoft calendars, meeting apps. database design, ensuring secure and efficient data transactions, and integrating OAuth2.0 services. I also implemented authentication and authorization mechanisms using keycloak for traditional registration to provide a seamless and secure user experience.
- Built on Spring Boot JAVA, Axon Framework, Event Driven andDDD, API Implementation on Kotlin, AWS S3 Storage, Keycloak Auth, MongoDB. Google API, Microsoft API, OAuth2.0

Project 3:- 4Paws : Pat-Care and e-commerce Platform

- 4Paws project focused on developing cutting-edge solutions to address a comprehensive pet care service platform, we designed and implemented robust APIs to handle functionalities such as scheduling doctor and grooming, hospital appointments, facilitating pet buying and selling through bidding systems, and managing an e-commerce section for pet-related products like food, medicine, and accessories.
- My responsibilities included database design, ensuring secure and efficient data transactions, and integrating third-party services. I also implemented authentication and authorization mechanisms using keycloak to provide a seamless and secure user experience.
- Built on Spring Boot JAVA, Axon Framework, Event Driven andDDD, API Implementation on Kotlin, AWS S3 Storage, Google geocoding API, Keycloak Auth, MongoDB.

Project 4:- WickLand : Park Management Software

- WickLand project is a park management system software. It will provide residences to the user, those types are Seasonal Chalet, Residential Chalet, Caravan and Holiday Chalet. They provide temporary accommodation for staying one year and they will also provide features to renewal/extend the license.
- Wick Land is an application for tenant management, ticket management, license management and billing management.
- Built on Spring Boot JAVA, MongoDB, S3 Storage, Keycloak Auth, Axon-Framework, API Implementation On Kotlin.

Project 5:- Psychometric & RIASEC Assessment Platform

- Developed a digital assessment system for conducting psychometric and RIASEC tests used in recruitment and career guidance. The system delivered psychometric evaluations (aptitude, personality, behavioral).
- Collaborated with HR experts to translate psychological models into system logic, improving assessment accuracy and efficiency.
- Built RESTful APIs with Java/Spring Boot for test delivery, scoring, and result generation. Implemented automated scoring algorithms and integrated database modules using Hibernate/JPA.

EDUCATION DETAILS

Course: Java Full-Stack Development From Satya Technologies HYD 2022 (Certified).

Bsc (General Science) From Acharya Nagarjuna University (ANU) GUNTUR 2018 - 2021.
